TERMINAL DISCLAIMER

1. The TERMINAL DISCLAIMER filed March 16, 2005, has been approved and has been entered.

Priority

2. The Examiner has checked the IFW file of the parent application (S.N. 09/923,443) and has found the certified copy of the foreign priority papers, which were filed August 8, 2001.

REASONS FOR ALLOWANCE

3. The following is an examiner's statement of reasons for allowance:

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

The prior art of record does not disclose or suggest at least one diffraction grating pattern being divided into eight regions, each of the regions includes a diffraction grating, and an image of the at least one diffraction grating pattern being projected onto a test substrate

or an image detector by the projection-type exposure apparatus in combination with all the other elements recited in independent claim 24.

The prior art does not disclose or suggest exposing the image of the at least one diffraction grating pattern and an image of the reference pattern onto the substrate simultaneously, the at least one diffraction grating pattern and the reference pattern comprising a test mark in the evaluation mask; and measuring a relative distance of the image of the at least one diffraction grating pattern formed on the substrate and the image of the reference image formed on the substrate in combination with all the other steps recited in independent claim 35

The prior art does not disclose or suggest exposing the image of the at least one diffraction grating pattern and an image of the reference pattern onto the substrate simultaneously, the at least one diffraction grating pattern and the reference pattern comprising a test mark in the evaluation mask under the condition of $\lambda / \{NA(1-\sigma)\} < P < 2 < \lambda / \{NA(1 + \sigma)\}$, where σ is a partial coherence of a lighting optical system for lighting the rest mark, P is a period of an image of a first pattern of the test mark, λ is the wavelength of light of the lighting optical system and NA is a numerical aperture of the projection optical system; and measuring the relative distance of the image of the at least one diffraction grating pattern formed on the substrate and the image of the reference image formed on the substrate in combination with all the other elements recited in independent claim 42.
